

Retail Intersection Clustering

Retail concentrated at road intersections per broker recommendation. Interior Kirkwood/Cook lots shift to flex. Deeper corner pads for QSR/retail anchors.

TARGET PROFILE

Optimized for **broker absorption**. Retail specialist-driven reconfiguration clusters retail at high-traffic intersections where ITPH internal roads meet Bissonnet, S Kirkwood, and Cook Rd. Corner retail priced at **\$18/SF premium**, flex interior at **\$10/SF**. Target: faster retail lease-up with realistic market positioning driven by broker feedback on lot desirability.

KEY FEATURES — RETAIL INTERSECTION CLUSTERING

- **Broker-driven reconfiguration:** Retail concentrated at the intersections where market demand is strongest — Bissonnet, Cook, S Kirkwood, and Collector road corners. Interior corridor

lots (S Kirkwood, Cook) shift from retail to flex/light industrial, directly addressing broker feedback that these locations are less enthusiastically embraced by the retail market.

- **Corner pads sized for QSR anchors:** Deep corner lots at Lots 1, 12, and 23 designed for national QSR tenants (McDonald's, Chick-fil-A) requiring larger footprints. Premium \$18/SF pricing on corners reflects proven demand for drive-through-capable pad sites.
- **Interior shift from retail to flex:** 13 interior lots (30.1 acres) repositioned as flex/light industrial at \$10/SF — realistic pricing for interior positions without road frontage. Eliminates speculative retail pricing on lots that brokers flagged as hard-to-place.
- **Multifamily anchors retained:** Four large multifamily parcels (48.5 acres) at \$7/SF preserved for EB-5/LIHTC compatibility and workforce housing demand. These parcels generate \$14.8M in revenue while providing built-in consumer base for the retail clusters.
