Monthly Project Report - November 1, 2026

1. EXECUTIVE SUMMARY

October resolved the question September left open: which of the three competing purchase offers is real. **Panattoni formally withdrew on October 30** — a written pass from Riley Hix citing their institutional capital partners' preference for environmentally clean sites, after their Houston team's environmental and risk management groups reviewed the deal. Panattoni's $4.00/SF indication never made it to a written LOI. **Stream Capital / Clark East remains flagged "unlikely"** — the sponsor's own October 28 assessment is that Stream, like Panattoni, depends on outside capital neither has been forthright about. That leaves **Clay Development as the clear leader**, and their position improved materially over the month: a revised LOI received October 29 raised the price to $22,008,037 ($3.70/SF, up from $21,413,225) and increased earnest money to $190,000 total (up from $50,000). Clay's broker (NAI Robert Lynn) has stated this is their best and final offer. **On October 31**, the sponsor advanced this to the final step: the Clay LOI, the underlying purchase contract, and a deal summary were sent to John Quinlan / Dublin, Inc. for review, and the sponsor indicated he expects to accept with Clay imminently — potentially resolving, in the same motion, both the buyer question and the Quinlan countersignature that has been outstanding since September.

Separately, two other developments moved the project forward this month. On **October 19**, an operation to import 160,000 cubic yards of certified-clean fill onto the site began — placed in low areas and former golf-course ponds — before the sponsor had a hold-harmless agreement in hand or Metro Structures (the site's general contractor) confirmed as present to oversee placement; both are now being arranged after the fact. And on **October 27**, the project team presented to the Houston-area neighborhood association on the landfill-to-development plan, with environmental, geotechnical, and engineering representatives (Kimley-Horn) on hand to field public questions — a visible diligence moment worth carrying into investor materials. The Quinlan buyout, agreed in principle in September, saw no documented movement in October; it remains unsigned by John Quinlan / Dublin, Inc. as of month-end.

TOTAL ACREAGE	LEAD OFFER	PANATTONI	QUINLAN BUYOUT
~136	**Clay — $22.0M**	**Withdrawn**	**Pending 10/31**
99 net developable	$3.70/SF, $190K earnest money, revised 10/29	Written pass, Oct 30 — capitalization/insurance concerns	Package sent to Quinlan 10/31; sponsor expects acceptance imminently

2. KEY DEVELOPMENT #1 — FIELD NARROWS TO ONE: CLAY LEADS, PANATTONI OUT, STREAM UNLIKELY

The month's central story is the collapse of three live offers down to one credible path. On **October 28**, the sponsor reported that, after further discussions, "it's becoming clear" Clay Development is the likely contender — both Stream and Panattoni rely on outside capital sources that neither has been willing to identify. The sponsor met with Clay's principals in Houston that same day. A revised LOI Comparison Matrix was circulated October 28 reordering Clay into the lead position, with Stream and Panattoni both flagged unlikely and the reasoning noted for each.

On **October 29**, Clay's counter-offer landed (via NAI Robert Lynn, in response to the sponsor's October 16 track-changed comments on their prior LOI) — "best and final," per their broker Josh Carl. The sponsor met with Clay again that week and asked them to tighten the LOI further, with a further-improved or final version expected by October 30. On **October 30**, Panattoni's Riley Hix sent a written pass: after review by their Environmental and Risk Management teams, the site "presents challenges... from both a capitalization and insurance standpoint," noting their institutional capital partners prefer environmentally clean sites and that they've had similar issues with sites carrying any oil-and-gas history. The sponsor's reply characterized the site as "environmentally certified," not merely clean, pushing back lightly on the characterization while accepting the pass.

OFFER	PRICE	EARNEST MONEY	STATUS AT MONTH-END
Clay Development	$22,008,037 ($3.70/SF) Was $21,413,225 ($3.60/SF) at Sept-end	$190,000 total (0.86%) — $70,000 within 5 days, $120,000 within 3 business days after feasibility ends Was $50,000 at Sept-end	**Lead bidder — "best and final" per broker, tightened version expected**
Stream Capital / Clark East (SCI)	$24,000,000 ($4.03/SF)	$240,000 (1.0%); refundability conflict in LOI text unresolved	**Unlikely — outside capital dependency confirmed by sponsor 10/28, sources undisclosed**
Panattoni Development	$4.00/SF verbal (≈$23,792,472)	Never documented	**Withdrawn — written pass received 10/30**

Open items before Clay's version is final (per the October 30 comparison memo): the LOI still shows a September 27, 2026 expiration on its face and needs reissue; whether the $120,000 second deposit is refundable once posted is unanswered in the LOI; the "Clay Development & Construction, Inc. or Affiliate" assignment right raises a question of whether a seller consent or capital-source disclosure should be required; and the LOI is silent on environmental disclosure despite the site's landfill history and the "environmentally certified" status the sponsor described to Panattoni — three items flagged for seller's counsel, plus a fourth for seller's tax advisor on roll-back tax exposure before closing.

Read-through: the field narrowing to a single credible bidder is progress, not risk — Clay has no disclosed outside-capital dependency (unlike the other two), its price and earnest money both improved materially over the month, and its broker has called this their final position. The job now is converting "best and final" into a signed, binding contract with the open counsel questions resolved, while the expired LOI date gets formally cured.

3. KEY DEVELOPMENT #2 — 160,000 CY CLEAN-FILL IMPORT BEGINS AHEAD OF PAPER

On **October 19**, the sponsor learned — from a local contact, not through the project's own GC channel — that an operation to import 160,000 cubic yards of certified-clean fill onto the ITPH site had commenced, with material being placed in low-fill areas and former golf-course ponds. Metro Structures (site GC) had not been informed the start date was Monday and had not yet seen the hold-harmless agreement governing the placement; their primary concerns are hold-harmless language, and liability for road damage or material tracking from trucks. The sponsor favors a hold-harmless agreement but had not arranged one in advance of the start date, and is now working to get Metro's Steve Meyer and SKA's Michael Schultz looped in to oversee where the fill is placed and confirm it matches the intended plan.

> **Why this matters:** 160,000 cubic yards of certified-clean fill delivered at no cost to the project is a meaningful in-kind contribution toward the site's development readiness — but starting the operation before the hold-harmless agreement and GC oversight were in place is a documentation and liability gap that should be closed immediately, not retroactively, especially with a live sale process underway.

ITEM	STATUS	OCTOBER NOTES
Fill import volume	In progress	160,000 cubic yards, certified clean; placed in low-fill areas and former golf-course ponds. Sponsor characterizes as "an excellent deal" — site needed the dirt.
Hold-harmless agreement	Not yet executed	Sponsor favors one but had not arranged it before the Monday start date; being drafted after the fact.
GC site oversight (Metro Structures)	Being arranged	Steve Meyer was not aware the start date was imminent; site visit planned to confirm placement matches plan and review road-damage/tracking liability.
Export right (Class 4 materials)	Referenced, unclear	Sponsor's email references "some sort of a right to export class 4 materials eventually" tied to the same deal — needs clarification and documentation.

4. COMMUNITY ENGAGEMENT & PUBLIC RELATIONS

On **October 27**, the project team presented to the Houston-area neighborhood association on converting the 136-acre former landfill into commercial, residential, retail, and light-flex space. Environmental, geotechnical, and engineering representatives (Kimley-Horn) were present to answer public questions directly about the site's future and safety. The sponsor framed it as a model of coordinated teamwork and addressed community concerns head-on. Photos from the meeting have been filed into the project data vault under "Community Meeting."

> **Investor-relevant takeaway:** visible, in-person diligence in front of the public — with named technical experts fielding questions — is exactly the kind of record that supports the landfill-to-development thesis to lenders, buyers, and the MUD electorate ahead of November's vote. This has been noted for inclusion in investor-facing materials going forward.

5. QUINLAN BUYOUT — PACKAGE SENT OCTOBER 31, DECISION PENDING

For most of October, no correspondence addressing the Quinlan buyout or the restated Bissonnet 136 Company Agreement was identified, and the position sat unchanged from September: terms agreed September 23 ($14.0 million expenditures at 10% IRR, plus $2.3 million accrued debt, plus a 50/50 split of an estimated $7.0 million remaining profit, netting the sponsor roughly $3.5 million), the sponsor had signed the restated Company Agreement, and John Quinlan / Dublin, Inc. had not executed any of his four signature blocks. That changed on the last day of the month: **on October 31, the sponsor sent the Clay LOI, the purchase contract, and a deal summary to Quinlan for review**, and reports he expects to accept with Clay imminently. Per the agreement's own §15.19, the restated Company Agreement still does not bind until all members sign — so Quinlan's countersignature remains the gating item, but it is now in front of him alongside the actual deal he'd be signing off on, rather than a standalone ask.

BUYOUT COMPONENT	AMOUNT / TERMS	STATUS AT MONTH-END
Expenditures (10% IRR)	$14.0M paid to Quinlan	Agreed 9/23 — no October change
Debt accrued to sponsor	$2.3M paid to Quinlan	Agreed 9/23 — no October change
Remaining profit (est. $7.0M)	50/50 split; ≈$3.5M to sponsor	Agreed 9/23 — no October change
Restated Company Agreement	Class A IRR 20%→10%; profit 85/15→50/50	Signed by sponsor only — no October change
Quinlan / Dublin, Inc. signature	4 blocks outstanding	Package sent 10/31 — decision pending

Updated 10/31: the restated Company Agreement is not binding until Quinlan/Dublin, Inc. executes all four blocks. The LOI, purchase contract, and deal summary are now in front of Quinlan, and the sponsor expects acceptance imminently — but until a signature is actually in hand, this remains the single gating item standing between Clay's best-and-final offer and a binding sale.

6. PUBLIC FINANCE — MUD & TIRZ

MUD 584
Active
District created; November 2026 vote stands

ELECTION
Nov.
2026 vote remains the central milestone

REIMBURSEMENT
$28.3M
Carried from August; no October revision on file

TIRZ
TBD
Structuring work continues

MUD: no new correspondence surfaced a change to the MUD 584 picture in October — the district remains active and headed to the November 2026 vote carried forward from prior months. That vote continues to govern the $28.3 million reimbursement estimate against the $33.0 million infrastructure budget set in August. The question raised in September — how the MUD election interacts with a pending sale to Clay — remains open and worth raising with district counsel before the vote, now that Clay has emerged as the one credible buyer rather than an abstract possibility.

TIRZ / other public finance: no quantified update this month; referenced only as ongoing structuring work and carried forward without new detail.

7. CONTRACTS & NEGOTIATIONS SUMMARY

WORKSTREAM	STATUS	OCTOBER NOTES
Quinlan Buyout	Package sent 10/31, decision pending	No movement most of October; on 10/31 the Clay LOI, purchase contract, and deal summary were sent to Quinlan. Sponsor expects acceptance imminently — not yet confirmed in writing.
Clay Development (LOI)	Lead bidder, tightening	Revised LOI received 10/29: $3.70/SF, $22,008,037, $190,000 earnest money. Broker calls it best and final; sponsor requested further tightening, expected by 10/30. Still shows stale 9/27 expiration.
Stream Capital / Clark East (SCI)	Unlikely	No LOI movement; sponsor's 10/28 assessment confirms undisclosed outside-capital dependency, same concern as Panattoni.
Panattoni Development	Withdrawn	Written pass received 10/30 from Riley Hix, citing capitalization and insurance concerns from their institutional capital partners; never had a written LOI.
Clean-fill import (160,000 CY)	In progress, paper trailing	Began 10/19/26; hold-harmless agreement and GC oversight being arranged after the start date.
Community engagement	Completed, positive	10/27 neighborhood association presentation with environmental/geotech/engineering reps on hand; filed to data vault.
Inbound buyer inquiries	One received	10/20: Tariq Zaka (Houston-area commercial developer) inquired via the project website; referred to the public capital-plan web app rather than NDA-gated materials; no further follow-up requested by inquirer.
Metro Structures (infrastructure OPC)	Carried from August	No new cost-estimate correspondence; August's $33.0M all-in OPC remains the governing figure pending any update.

8. PROJECT STATUS DASHBOARD

TOPIC	STATUS	KEY NOTE
Whole-site sale	One credible bidder	Clay Development leads, improving terms, broker calls it final; Stream unlikely, Panattoni withdrawn.
Quinlan buyout	Decision pending (as of 10/31)	Full package (LOI, contract, deal summary) sent to Quinlan 10/31; sponsor expects acceptance imminently, not yet confirmed in writing.
Site infrastructure	Advancing	160,000 CY clean-fill import underway; hold-harmless/GC oversight catching up.
MUD 584	Active	No change; November 2026 vote remains the milestone.

TOPIC	STATUS	KEY NOTE
Community relations	Positive	10/27 neighborhood presentation well received per sponsor's account.
Financial controls (no ITPH ledger)	Open, carried from August	No October correspondence closing this gap; remains a diligence risk given the live sale process.
Retail lot pricing	No October update on file	September's active discounting track not referenced again this month.

9. RISK ASSESSMENT

RISK	LEVEL	ASSESSMENT
Stale LOI expiration	Elevated	Clay's LOI still shows a September 27, 2026 expiration on its face and has not been formally reissued or extended in writing — a technical defect that should be cured before the deal is treated as binding.
Unresolved counsel questions	Medium	Deposit refundability, assignment/capital-source disclosure, and environmental representation language are all open in the Clay LOI; should be resolved by counsel before signing, not after.
Quinlan signature risk	Elevated, decision imminent	Full package sent to Quinlan 10/31 and sponsor expects acceptance imminently, but no signature is in hand as of month-end — a purchase contract should not outrun the underlying ownership agreement until it's actually executed.
Fill-import liability gap	Medium, narrowing	Material placement began before hold-harmless paperwork and GC oversight were confirmed; being addressed retroactively, which narrows but does not eliminate exposure for the period already elapsed.
Financial controls	Medium-High, unaddressed	No ITPH ledger exists on the sponsor's own books; carried unresolved since August and now more relevant given active sale negotiations.

10. NOVEMBER OUTLOOK

- **Get Clay's tightened LOI finalized and formally reissued** — cure the stale September 27 expiration date and resolve the three counsel questions (deposit refundability, assignment/capital-source disclosure, environmental representation) before signing.
- **Confirm Quinlan's countersignature in writing** — package sent 10/31, sponsor expects acceptance imminently; get the executed signature pages in hand before treating the ownership structure as settled.
- **Formalize the fill-import paperwork** — execute the hold-harmless agreement and confirm Metro Structures' and SKA's ongoing site oversight for the remainder of the 160,000 CY operation.
- **Raise the MUD-versus-sale question with district counsel** — confirm whether a closed sale to Clay affects the reimbursement right ahead of the November vote.
- **Close the financial-controls gap** — carried from August; establish an ITPH ledger or periodic third-party financial feed given the live sale process.

— **Carry the October 27 community meeting into investor materials** — the public diligence moment (environmental, geotech, and engineering reps fielding questions) is a strong credibility point for lenders, buyers, and the MUD electorate.

SUMMARY

October narrowed three competing purchase offers to one credible path: Clay Development, now at $22,008,037 ($3.70/SF) with $190,000 in earnest money, improved and tightening through the month, with its broker calling it best and final. Panattoni formally withdrew October 30 over institutional capitalization and insurance concerns; Stream Capital / Clark East remains flagged unlikely over undisclosed outside-capital dependency. Separately, a 160,000-cubic-yard clean-fill import began on site October 19, and the project team presented to the neighborhood association October 27 with strong technical representation in the room. The month closed with the strongest signal yet: on **October 31**, the Clay LOI, purchase contract, and deal summary were sent to Quinlan, and the sponsor expects to accept with Clay imminently.

November's job is to convert that expectation into signatures in hand — a binding contract with Clay with the counsel questions resolved and the stale LOI expiration cured, and Quinlan's actual countersignature on the restated Company Agreement, not just the package sitting in front of him.
